SNSOP PAYMENT PROCEDURE GUIDE

1. Loading Payroll

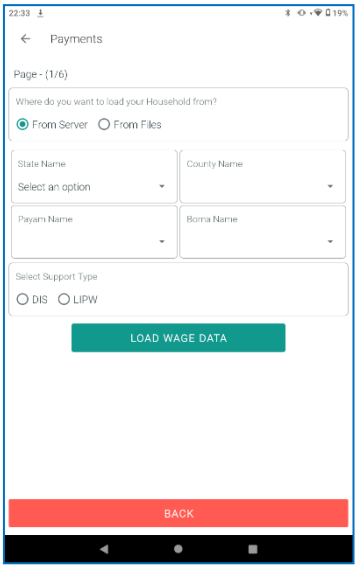

The initial step in the payment process involves loading the payroll data into the system. This can be done through two methods:

1.1. AFIS MIS (From Server)

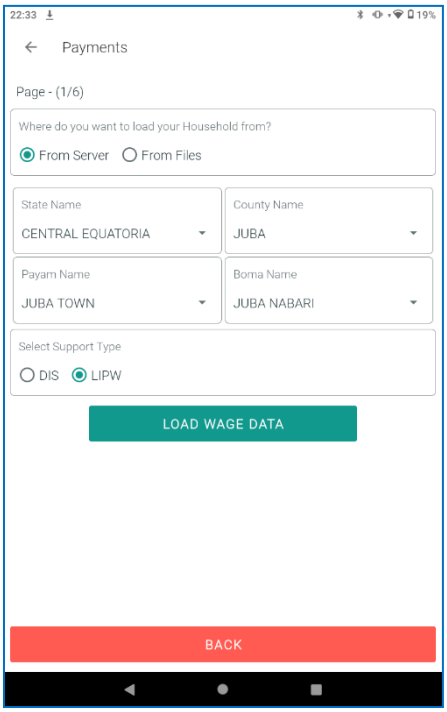

In the Payment Setup, enter the necessary information in the Payment Center field, latitude field, longitude field,
Click on the 'Save Payment Setup' button.

Choose the 'From Server' option within the system interface.
Select the appropriate 'Address' and 'Support Type' for the payroll you wish to load

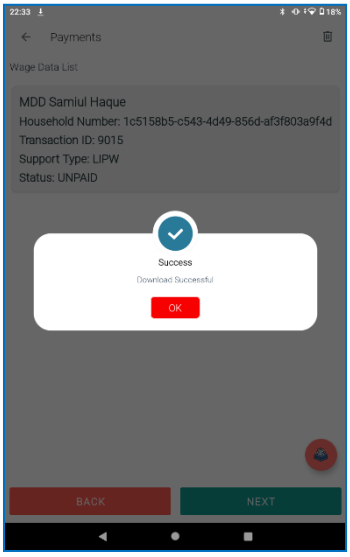

Click on the 'Load Wage Data' button to retrieve the relevant payroll information directly from the AFIS MIS database.

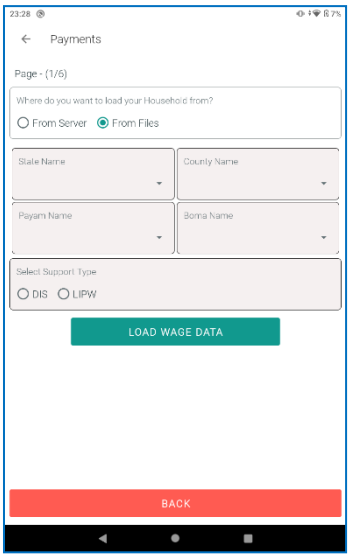

If it's done correctly, then successful message will show.

NOTE: Once the task "From Server" is completed, the next step will begin from "Locking Payroll".

1.2. AFIS MIS (From File)

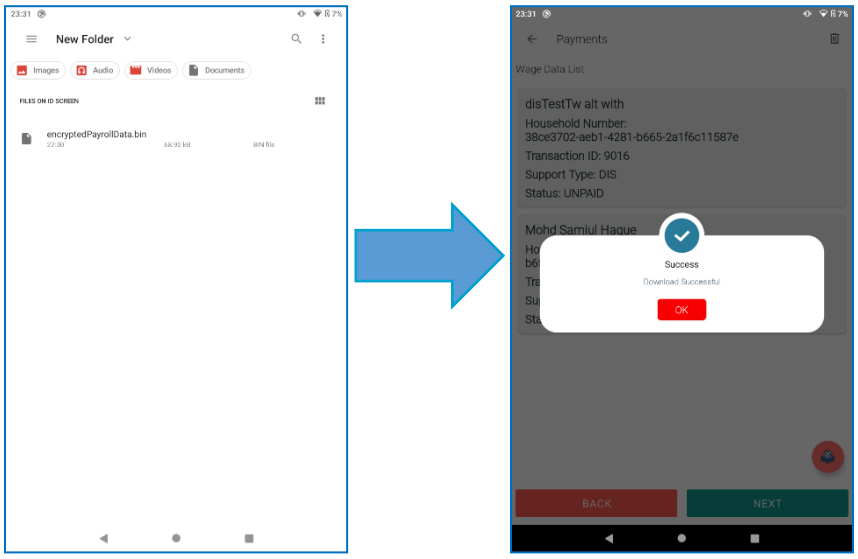

Choose the 'From File' option within the system interface. Click on Load Wage Data to initiate the process.

Browse your file system to locate and select the specific file containing the wage data.
Once selected, the system will upload the payroll information into the SNSOP MIS (Management Information System).

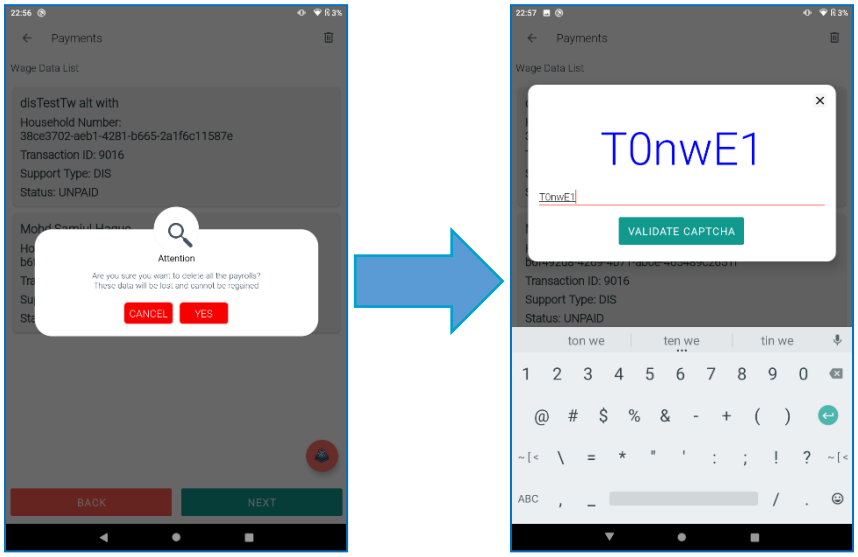

If it's done correctly, then successful message will show.

NOTE: Once the task "From File" is completed, the next step will begin from "Locking Payroll".

1.3. Wage Data Deletion Process with CAPTCHA Verification

After downloading the wage data from server or from file selection, click on the delete icon if you want to delete it. To complete the deletion, a CAPTCHA will be displayed, and by entering the CAPTCHA, you can delete the data from the wage data list.

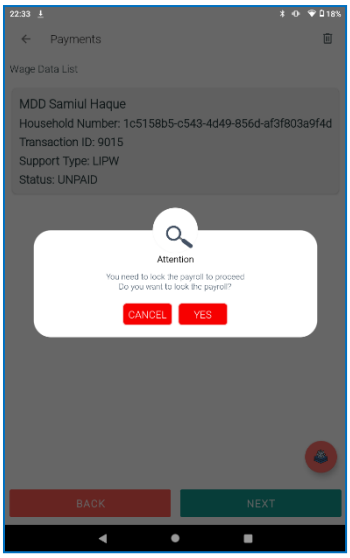

2. Locking Payroll

After loading the payroll data, it is essential to address the status of the payroll.

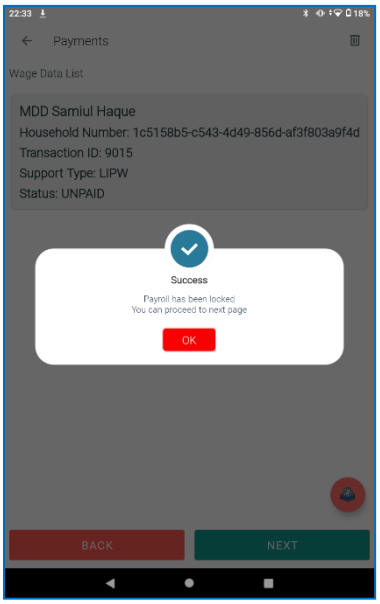

- Locked Payroll:

If the payroll was previously locked, the system will prevent any further processing. In such cases, a member of the MIS (Management Information System) team must unlock the payroll before any subsequent actions can be taken.

- Unlocked Payroll:

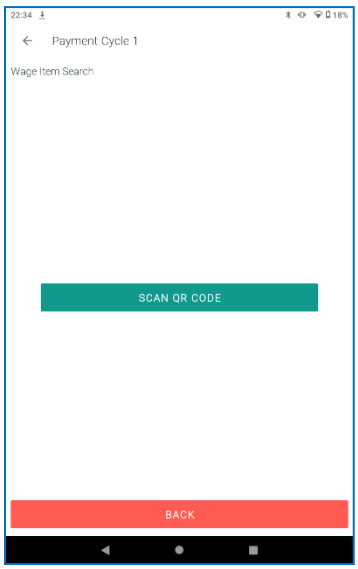

If the payroll has not been locked, you must manually lock it to proceed with the payment process. This step is crucial to prevent any unauthorized modifications or errors in the payroll data

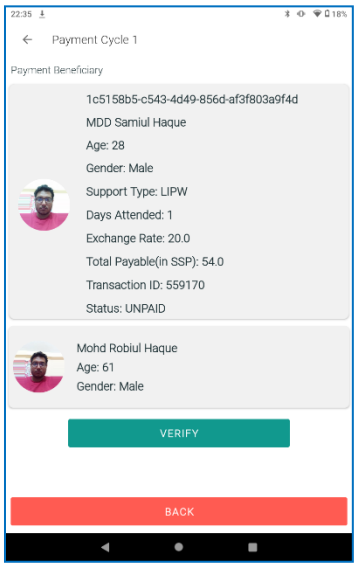

3. Beneficiary Verification

Beneficiary verification is an important step to ensure that payments are made to the correct individuals:

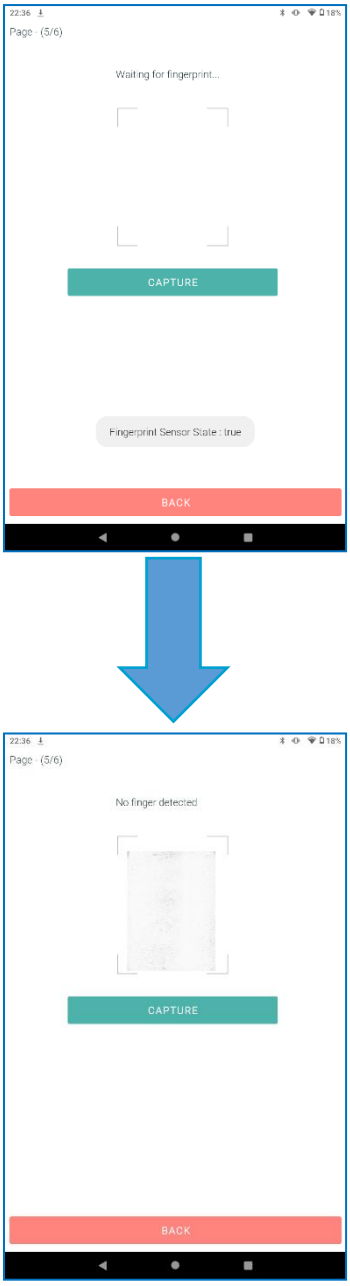

Use the system to scan the QR Code on the beneficiary's ID card. This will pull up the relevant beneficiary data for verification.

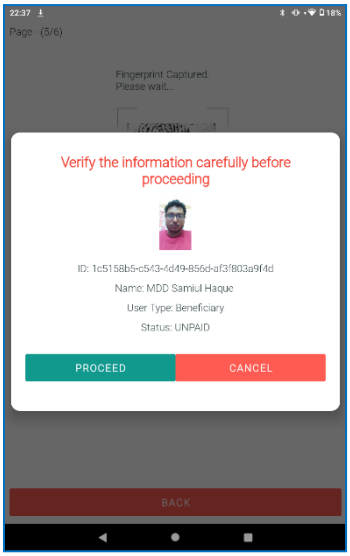

After scanning, if the beneficiary's information matches, click the 'Verify' button.

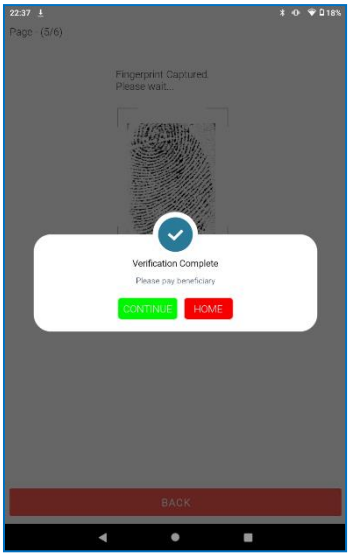

The beneficiary must then be verified using their fingerprint. This biometric check confirms the identity of the beneficiary against the data stored in the system.

If the beneficiary's information matches from all aspects, click on 'Proceed' carefully.

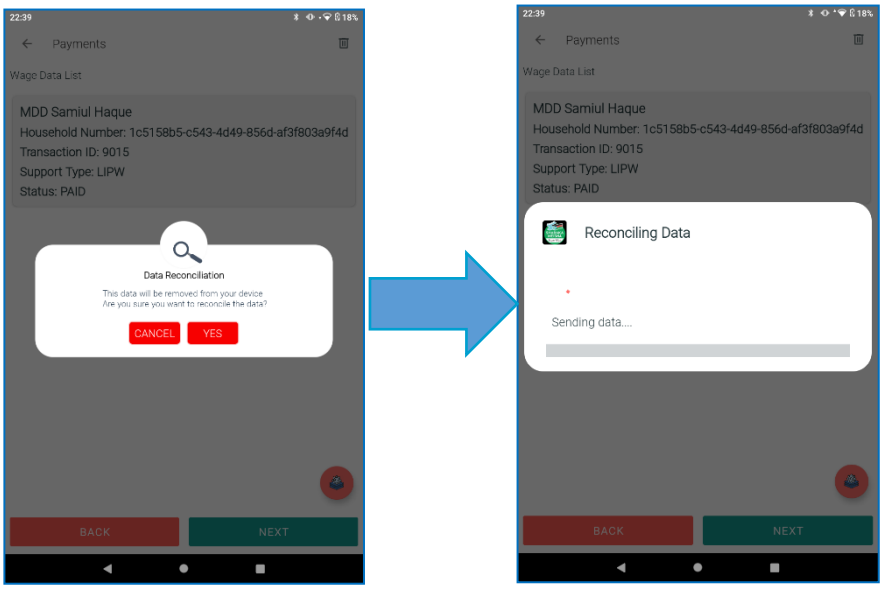

After biometric verification, cross-check the details displayed on the system to ensure accuracy. Once confirmed, proceed to authorize the payment.

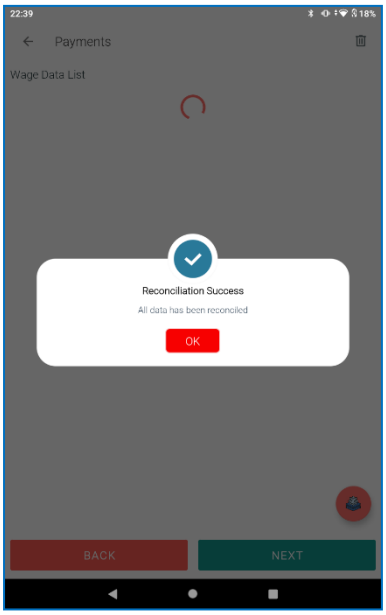

4. Reconciliation

The final step in the payment process is reconciliation:

After the beneficiaries have been successfully paid, the payroll data will be sent for reconciliation. This process involves verifying that the payments have been accurately disbursed and recorded.

- **NOTE:**

Once reconciliation is complete, the reconciled payment information will be synchronized from the AFIS MIS back to the SNSOP MIS. This ensures that all records are up-to-date and consistent across both systems.
